

Earth/Arbor Day Rain Barrel Workshop

This storage of rain water serves dual purposes. First, the water can be used for purposes such as gardening, washing down patio furniture, lawn watering, etc. that otherwise tap water would have to be used for. This ends up allowing the owner to use the collected water for these uses instead of paying for tap water. Second, the rain barrels serve an environmental purpose. By storing the rain water, there is a decreased impact of stormwater runoff to rivers, lakes and the Gulf which helps to protect the environment and minimizes sewer back ups.

The workshop will include a brief overview about water harvesting, how to make your rain barrel, and then everyone will be able to make their own.
